Agentic Coding

Rebuilding ConFoo's Website with AI Agents

RIDA AL BARAZI · CONFOO 2026

Feedback

Yesterday: give agents safe ground.

Today: build on it.

Slides from yesterday → `rbarazi.github.io/confoo-2026-safe-agentic-dev-environments`

What We're Building

ConFoo's conference website → a Rails app

193 sessions · 108 speakers · real data

Two agents building in parallel on separate branches

Automated cross-model code review on every PR

```
github.com/rbarazi/confoo26
```

STEP 1

The Style Guide Skill

Giving agents coding conventions before they write a line

```
github.com/marckohlbrugge/unofficial-37signals-coding-style-guide
```

STEP 2

Isolated Environments

Two branches · two agents · zero conflicts

```
github.com/branchbox/branchbox
```

STEP 3

The Agent Sessions

CLAUDE

Data models · Import pipeline · API

Spec, not step-by-step instructions

CODEX

Schedule UI · Speaker pages · Navigation

Style guide skill loaded automatically

The spec is a convincing argument — not instructions. Context, constraints, what "done" looks like. Same walkthrough you'd give a new teammate on day one.

STEP 4

Cross-Model Review

Claude builds · Codex builds · Gemini reviews

CLAUDE	CODEX	GEMINI
Build	Build	Review

Structural dissent **by design**.

The Result

Merge · refresh · ship.

What Just Happened

1. Created a style guide skill from an open-source repo
2. Spun up isolated environments with BranchBox
3. Two agents built in parallel — Claude (data) + Codex (UI)
4. Both inherited the same coding conventions automatically
5. Gemini reviewed every PR — different model, fresh eyes
6. Merged and shipped a working app with real data

The model isn't the bottleneck. Your workflow is.

Thank You
